it has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events it is not that the facts of history have changed no one will dispute that the battle of waterloo occurred on june 11 1815 or that the allied invasion of europe began on june 6 1944 what each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation by examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational cultural and economic realities hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities

when work began on the first volume of this text in 1992 the science of distribution management was still very much a backwater of general management and academic thought while most of the body of knowledge associated with calculating eoqs fair shares inventory deployment productivity curves and other operations management techniques had long been solidly established new thinking about distribution management had taken a definite back seat to the then dominant interest in lean thinking quality management and business process reengineering and their impact on manufacturing and service organizations for the most part discussion relating to the distribution function centered on a fairly recent concept called logistics management but despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of competitive advantage on its own most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day to day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives in the end distribution management was for the most part still considered a dreary science concerned with transportation rates and cost trade offs expediting and the tedious calculus today the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business

this third edition provides operations management students academics and professionals with a fully up to date practical and comprehensive sourcebook in the science of distribution and supply chain management scm its objective is not only to discover the roots and detail the techniques of supply and delivery channel networks but also to explore the impact of the merger of scm concepts and information technologies on all aspects of internal business and supply channel management this textbook provides a thorough and sometimes analytical view of the topic while remaining approachable from the standpoint of the reader although the text is broad enough to encompass all the management activities found in today s logistics and distribution channel organizations it is detailed enough to provide the reader with a thorough understanding of essential strategic and tactical planning and control processes as well as problem solving techniques that can be applied to everyday operations distribution planning and control managing in the era of supply chain management 3rd ed is comprised of fifteen chapters divided into five units unit 1 of the text the scm and distribution management environment sets the background necessary to understand today s supply chain environment unit 2 scm strategies

channel structures and demand management reviews the activities involved in performing strategic planning designing channel networks forecasting and managing channel demand unit 3 inventory management in the supply chain environment provides an in depth review of managing supply chain inventories statistical inventory management and inventory management in a multiechelon channel environment unit 4 supply chain execution traces the translation of the strategic supply chain plans into detailed customer and supplier management warehousing and transportation operations activities finally unit 5 international distribution and supply chain technologies concludes the text by exploring the role of two integral elements of scm international distribution management and the deployment of information technologies in the supply chain environment each chapter includes summary questions and problems to challenge readers to their knowledge of concepts and topics covered additionally supplementary materials for instructors are also available as tools for learning reinforcement

as we approach the twenty first century the problems of industrialization are evident we find there is a greenhouse effect the ozone layer is being depleted the rain is acidified and there is a terrible problem of increasing CO_2 concentrations in the atmosphere the carbonic anhydrases are a unique family of enzymes that solve these problems in the human body they are responsible for converting CO_2 a gas to H_2CO_3 which is the biggest intracellular buffer with a concomitant decrease in H^+ hydroxyl ion globally the functions of the carbonic anhydrases in photosynthesis in rain forests and in the algae and plankton that cover our oceans indicate that they are also of utmost importance in the maintenance of the acid base balance on our planet although the whole field of CO_2 metabolism is enormous and still rapidly expanding because of the research interests of the editors this book is mainly concerned with mammalian carbonic anhydrases however if the interested reader intends to purify carbonic anhydrases from nonmammalian sources Dr. Chag Widden has provided the necessary information in chapter 7 the carbonic anhydrases were first discovered in 1933 until 1976 there were thought to be only two isozymes since then CA_{III} , CA_{VI} and CA_{VII} have been discovered and well characterized there is of course no reason to believe that we have found them all

the book begins with a thorough introduction to complex analysis which is then used to understand the properties of ordinary differential equations and their solutions the latter are obtained in both series and integral representations integral transforms are introduced providing an opportunity to complement complex analysis with techniques that flow from an algebraic approach this moves naturally into a discussion of eigenvalue and boundary value problems a thorough discussion of multi dimensional boundary value problems then introduces the reader to the fundamental partial differential equations and special functions of mathematical physics moving to non homogeneous boundary value problems the reader is presented with an analysis of Green's functions from both analytical and algebraic points of view this leads to a concluding chapter on integral equations
