this book contains the lectures presented at the international workshop on relation between laboratory and space plasmas held at gakushi kaikan university alumni association kanda in tokyo japan on 14 15 april 1980 its aim was to bring together laboratory fusion and space plasma physicists and to highlight the communality of basic plasma phenomena similarities

and differences observed in the laboratory and in space thus exchanging information and views on new ideas to link both areas although similar type of conferences were held in Europe and recently in the States this is the first time we have had in Japan for such an international meeting which may be regarded as an extended version of our national workshop held twice at the Institute of Plasma Physics of Japan IPPJ in 1976 and in 1977 IPPJ research report no 286 and no 365 the workshop consisted of seven regular sessions and one special session with approximately ninety participants from all over the world thirty six papers invited and contributed were presented nine from U.S.A. three from U.S.S.R. two of each from Germany France India one of each from Sweden Canada Belgium and fifteen from Japan the topics covered were 1 the critical velocity 2 beam plasma discharges and interactions 3 double layers and shocks 4 instabilities in the equatorial and auroral electrojets 5 turbulent and anomalous plasmas 6 plasma irregularities 7 solar plasma phenomena 8 active experiments in space plasmas and their simulation in the laboratory

A new satellite triaxial accelerometer system has been developed this instrument has been flight tested on three axis stabilized satellites and has demonstrated the capability to accurately measure accelerations in the satellite's in track cross track and radial directions the in track data provide direct determination of atmospheric density these data obtained during a period of high solar flux supplement the extensive set of measurements obtained by other accelerometer experiments during low solar flux conditions the cross track and radial results permit for the first time large scale measurements of the zonal and possibly radial components of neutral atmospheric winds these simultaneous wind and density data provide

an extremely valuable input for the understanding of dynamic processes in the atmosphere and for the improvement of atmospheric models

the extent of harmful effects of pollution on atmospheric terrestrial and aquatic environments can be translated into extreme temperature changes dirty air clean water shortages and increased incidence of toxicity that harms every life on earth within a lifetime our environment is changing drastically much of the information of environmental pollution impacts needs to be studied from the mechanism of toxic nanoparticles on the molecular level to the detection of trace gases on the satellite perspective it is therefore essential to develop advanced monitoring techniques efficient process technologies and health impact assessment tools to fill the gaps in our scientific knowledge this edition of atmospheric and biological environmental monitoring is a handful of recent developments and techniques from environmental scientists in well diversified fields these collections of manuscripts are extracts from the recently concluded 7th international symposium on advanced environmental monitoring organized by the advanced environmental monitoring and research center ademrc gwangju institute of science and technology gist korea and held on february 25 28 2008 in honolulu hawaii the three parts highlight important aspects of emerging environmental monitoring technologies atmospheric environment contaminants control process and environmental toxicity assessment observational tools presented in the first part ranges from in situ measurements to satellite remote sensing for atmospheric monitoring highlighted in the second part is the recently developed water quality monitoring system for lake stratification and membrane technologies for detection and removal of contaminants lastly toxicity monitoring of endocrine disruptors and nanoparticles are highlighted in the third part with new discoveries
